

What is claimed is:

1. A golf club protective cover comprising an outer bag having a single opening, and an inner bag having a single opening and inserted in said outer bag with its edge defining said opening fused to the edge of said outer bag defining said opening to define a hermetically sealed air chamber between said outer bag and said inner bag, said outer and inner bags being formed of a flexible, airtight sheet, said outer bag having an air valve through which air can be introduced into and discharged from said air chamber.

2. The golf club protective cover as claimed in claim 1 wherein said outer bag and said inner bag are formed by putting one sheet for said outer bag on another sheet for said inner bag with all sides aligned with each other, folding them in two with the sheet for said outer bag outside, fusing together the side edges (four) of the two sheets at both sides, and fusing together the end edges of the two sheets at two positions separately to form a hermetically sealed air chamber.
